BMP Automotive #10

TITLE: SPRAY PAINT FILTER DISPOSAL

Regulatory Citation: 6 NYCRR Part 372

Applicability: Waste spray paint filters generated by the spray-painting operation located in Cogan.

Purpose: Proper handling, storage and disposal of waste filter.

Person or

Department Responsible: Automotive Department Chairman (629-7272)

Schedule: As needed

Procedures: Sampling of the waste spray paint filter has indicated that they are currently non-hazardous. Therefore, spray paint filters may be disposed of as solid waste. However, the Director of Environmental, Health Safety must review MSDS of any new coating materials used in the spray paint booth. If the new coating contains any contaminants of concern, a new waste determination will be conducted.

If any new coatings have been used since the last change out of filters, then the Automotive Technician will contact the Director of EHS before changing the filters. Additional testing will then be conducted (for ignitability and metals and other materials, based on a review of paint MSDSs) and proper disposal determined based on the results.

Record keeping: waste determinations

Record

Location: EHS office, environmental files

Contact: Automotive Department Technician (629-7190)
Director of Environmental Health and Safety (629-7163)
